Motivation

How has our white-label solution helped Dawiyni to become the first ever telemedicine platform in Maltania?

FRiZHUB case study

Dawiyni

About Dawiyni

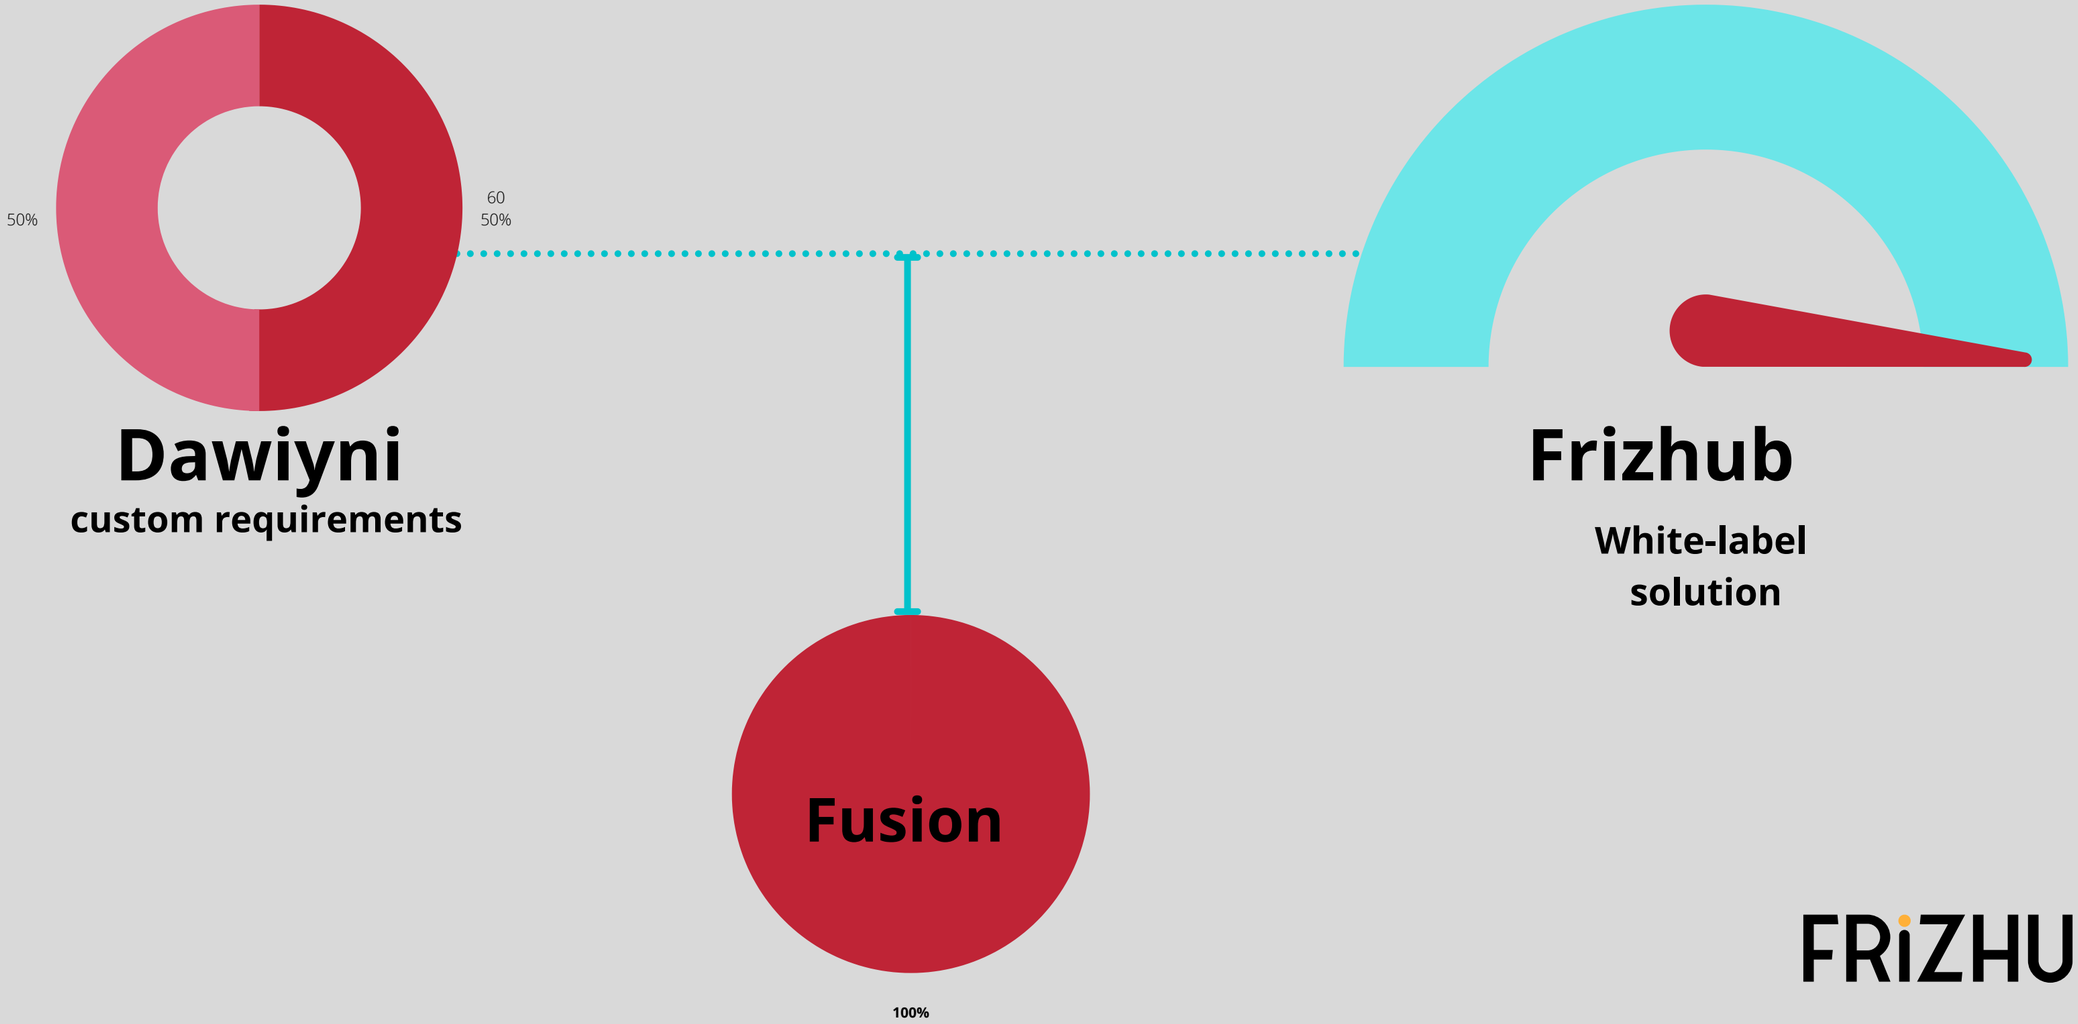
Improving the scale of digitized health care & furnishing modern-era custom build white label bridge between doctors & patients.

Dawiyni reached and hired us as their engineering partner to create a telemedicine platform where users can connect with doctors on their panel and get medical attention. They also wanted a way to digitize the records so the doctors or the patients don't have to jump between platforms

Having built a complete white label system for telemedicine at the beginning of the pandemic, we proposed to modify the white label that has reshaped telemedicine grounds for multiple startups. The white label is state of the art and uses modern cutting-edge solutions to propose complete flexibility.

FRiZHUB

What needed to be done to create a perfect fusion of perfection?



FRiZHUB

A Remedy to Orthodoxic flow

At the end of the day, you can go for pre-built apps to save time and money or develop your app for a custom fit. what if our white label will be a custom fit to your requirements?

In our continuous cycles of research and brainstorming sessions linked with the competitive study of the Telemedicine market, we highlighted and categorized that our main challenges were:

Problem

Visiting a doctor physically and maintaining a viable health history.

Affect and Impacts

The traditional methods of consulting a doctor and managing health records.
To establish an effective solution easily managed by any health organization.

- Time-saving
- Eliminating the manual process of health management.

Solution

A web portal that can be accessed anywhere around the globe.

FRiZHUB

Less than 4 weeks!

Deployment Process

The Dawiyni application was deployed in less than four weeks.

FRiZHUB

Tech Stack Implementation

Data Management

The selection of MYSQL was mainly about security and on-demand Scalability. It provides better performance to manage large-scale of data

Development Environment

NodeJS, a push-based Architecture, and reliable development environment. The backend of Our white label solution is Built on it. The mirror Side of our hard work should be reflected in the best declarative, efficient, and flexible way. To accomplish the boundaries of the web our developers inherited React.

Third party Services

In order to make the notifications work seamlessly, we used firebase cloud messaging. Data will talk to you if you're willing to listen and for that sole reason we used Google Tag Manager. Integrated Chat, Audio/Video as well as SMS Verification with Twilio. AWS serverless for cloud services

What makes you unique

It serves a variety of purposes, making presentations powerful tools for convincing and teaching.

FRiZHUB

A futuristic approach to health care

Records, prescriptions and vaccinations

Patients can keep a history of different types of tests and reports. They can choose to share their medical records, vaccination, and past prescriptions with a doctor while they are in consultation

Wallet and Payouts

Currently, there is no direct payment gateway such as PayPal or Stripe, the patient can top up their wallet using their debit cards and keep a track of wallet transactions and make online consultations with the wallet credit

Smart Chat

Interact with a doctor using chat, audio, or video calls (Integrated socket.io to ensure smooth and fluid calls with low bandwidth areas technologies).

Keyword Search

enables patients to Advanced doctor searches based on symptoms, diseases, conditions, and doctor specializations.

Smart Browse

allowing patients to browse doctors as per their specialties i.e. neurology, kidney, heart, etc.

Ratings

Allowing patients and doctors to rate each other after consultation in order to maintain a positive track on both ends

FRiZHUB

List of Doctors

Patients can view the doctors nearby and can view the list of doctors based on cities, names, specialties, etc.

Appointments

doctors can view the list of patients' appointments on their dashboard. patients can see their appointments with their respective doctors.

List of Patients

doctors can view the list of patients added on their dashboard based on their names, cities, diseases, etc.

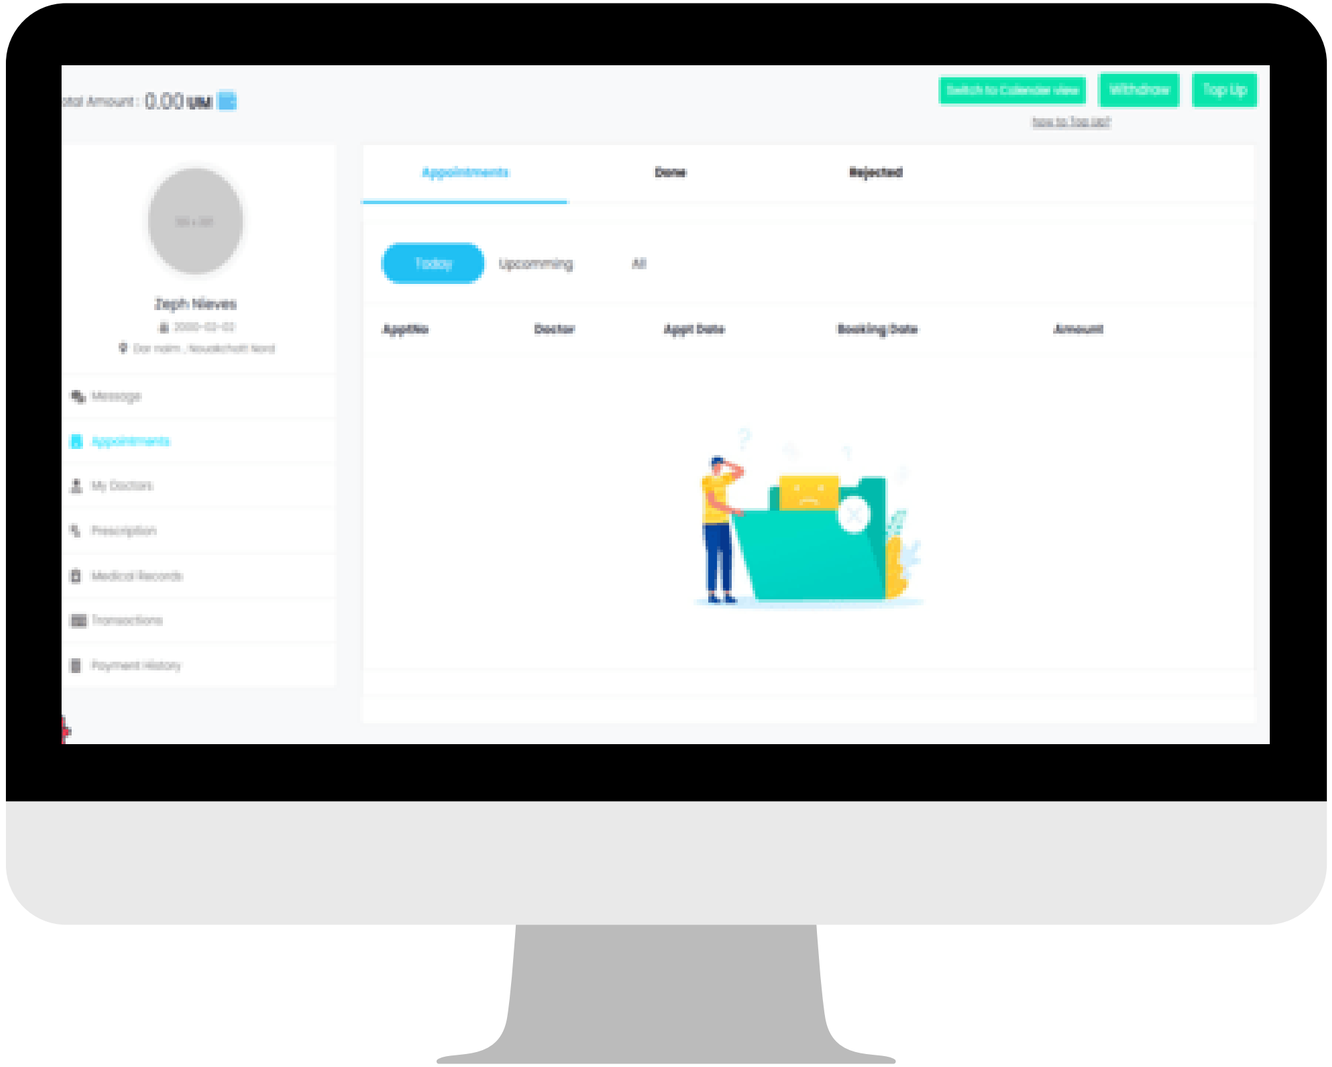
Dialing up Dawiyni: Design Layouts

The design of the app was a big challenge. Although this was just another digitized platform, attention to detail was very important. The color scheme for uplinks and interface is designed to facilitate doctors and patients in an effective manner. The **ReactJS** and **ANT designs** were designed completely in-house. The next sections translate to the following screens:

1. **Appointments**
2. **List of Doctors**
3. **List of Patients**
4. **Keyword Search**
5. **Smart Chat**
6. **Smart Browse**
7. **Dashboard**

ONE OF THE BIGGEST OPPORTUNITIES TELEMEDICINE PRESENTS IS INCREASED ACCESS TO HEALTH CARE. WE AT FRIZHUB, POSITIVELY DEVELOPED A WHITE LABEL SOLUTION THAT HAS MET THE NEEDS OF VARIOUS HEALTH CARE ORGANIZATIONS INCLUDING "DAWIYNI" IN THIS ONGOING ERA OF COVID-19.

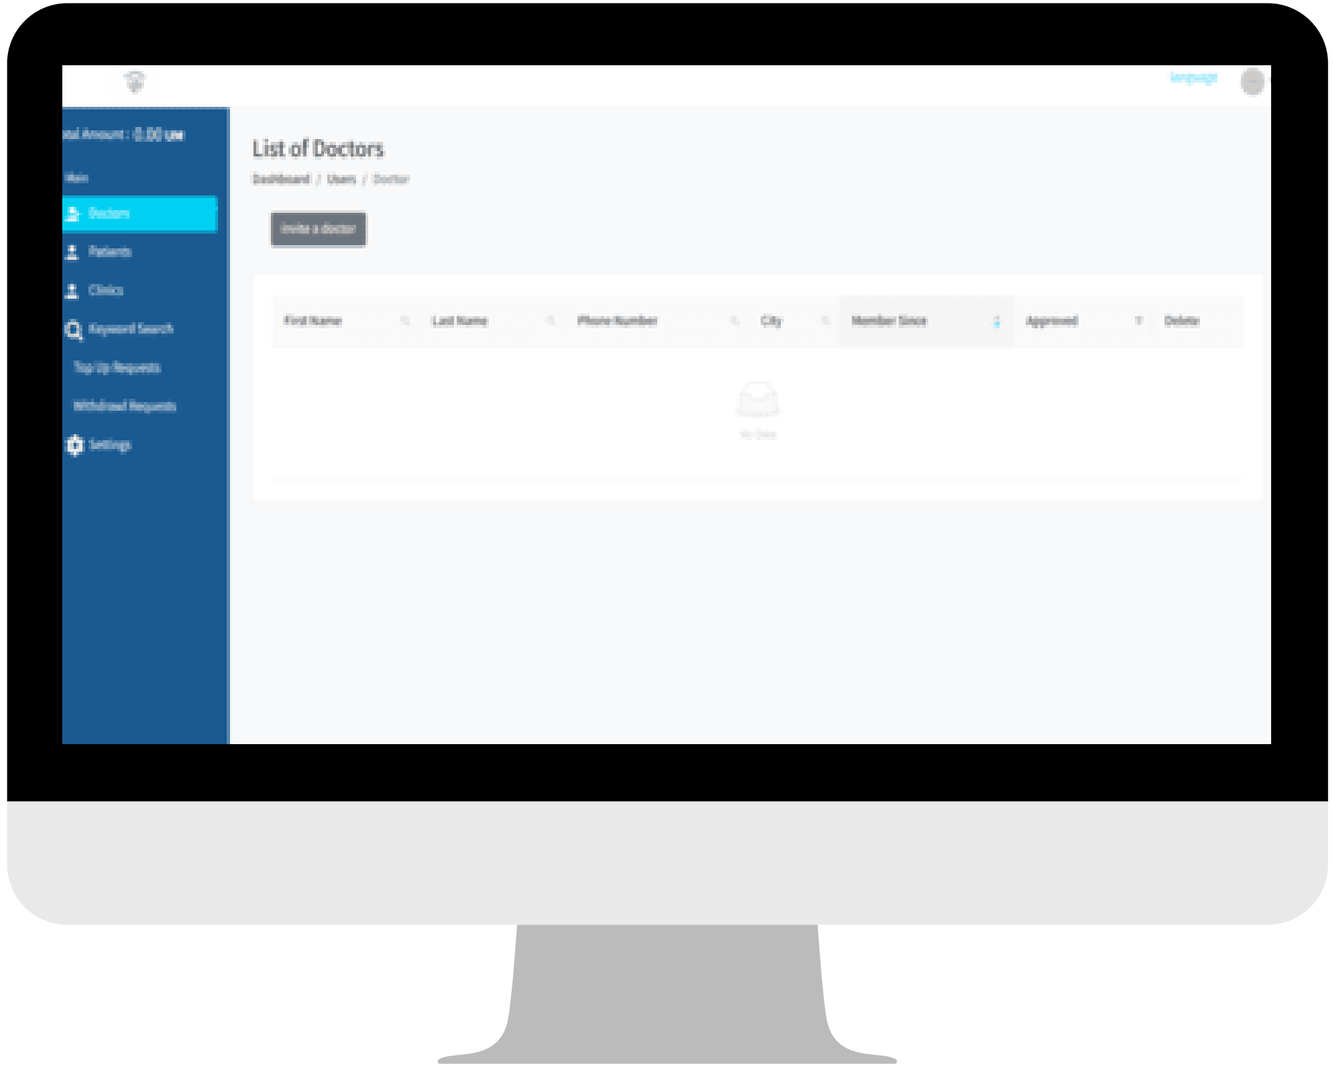


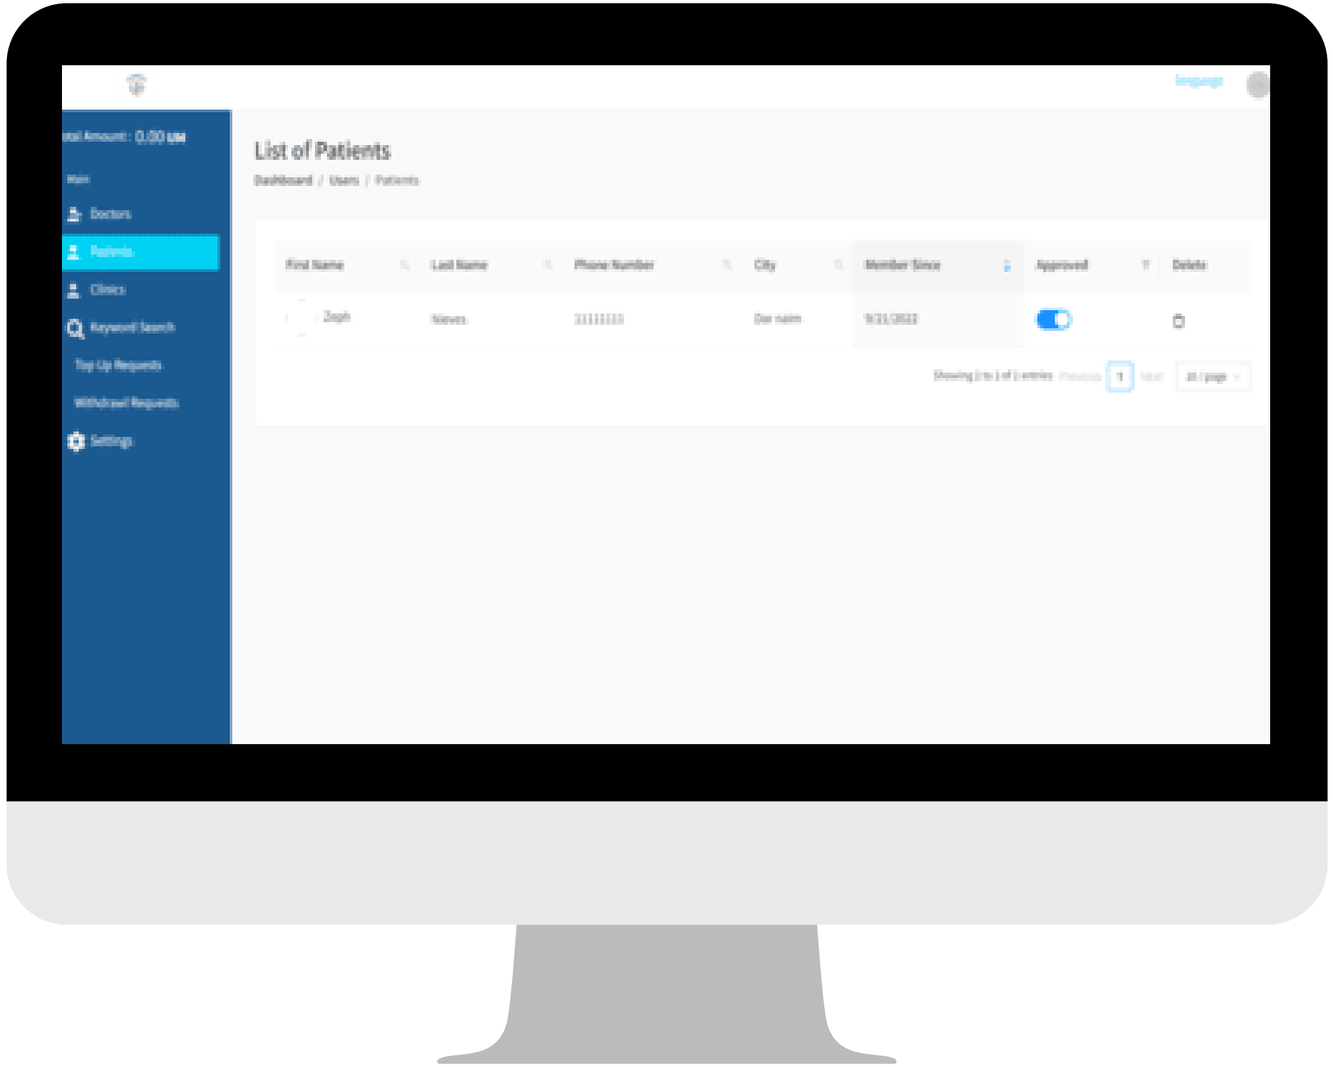
Appointments

With manual booking routines, many patients have a problem with not showing up for an appointment. The application will allow patients to View and Search their current or scheduled appointments with their doctors. The application will notify patients of their scheduled appointments.

List of Doctors

The doctor-patient relationship has been and remains a keystone of care. Increasing patient data for a doctor suggests and potentially increases consultation. The application will allow doctors to view patients, patient health metrics, previous conditions/symptoms, and other details. The application will allow the doctor to add comments after the consultation which later on are added as reviews. The application will allow the doctor to rate the patient after consultation based on stars.



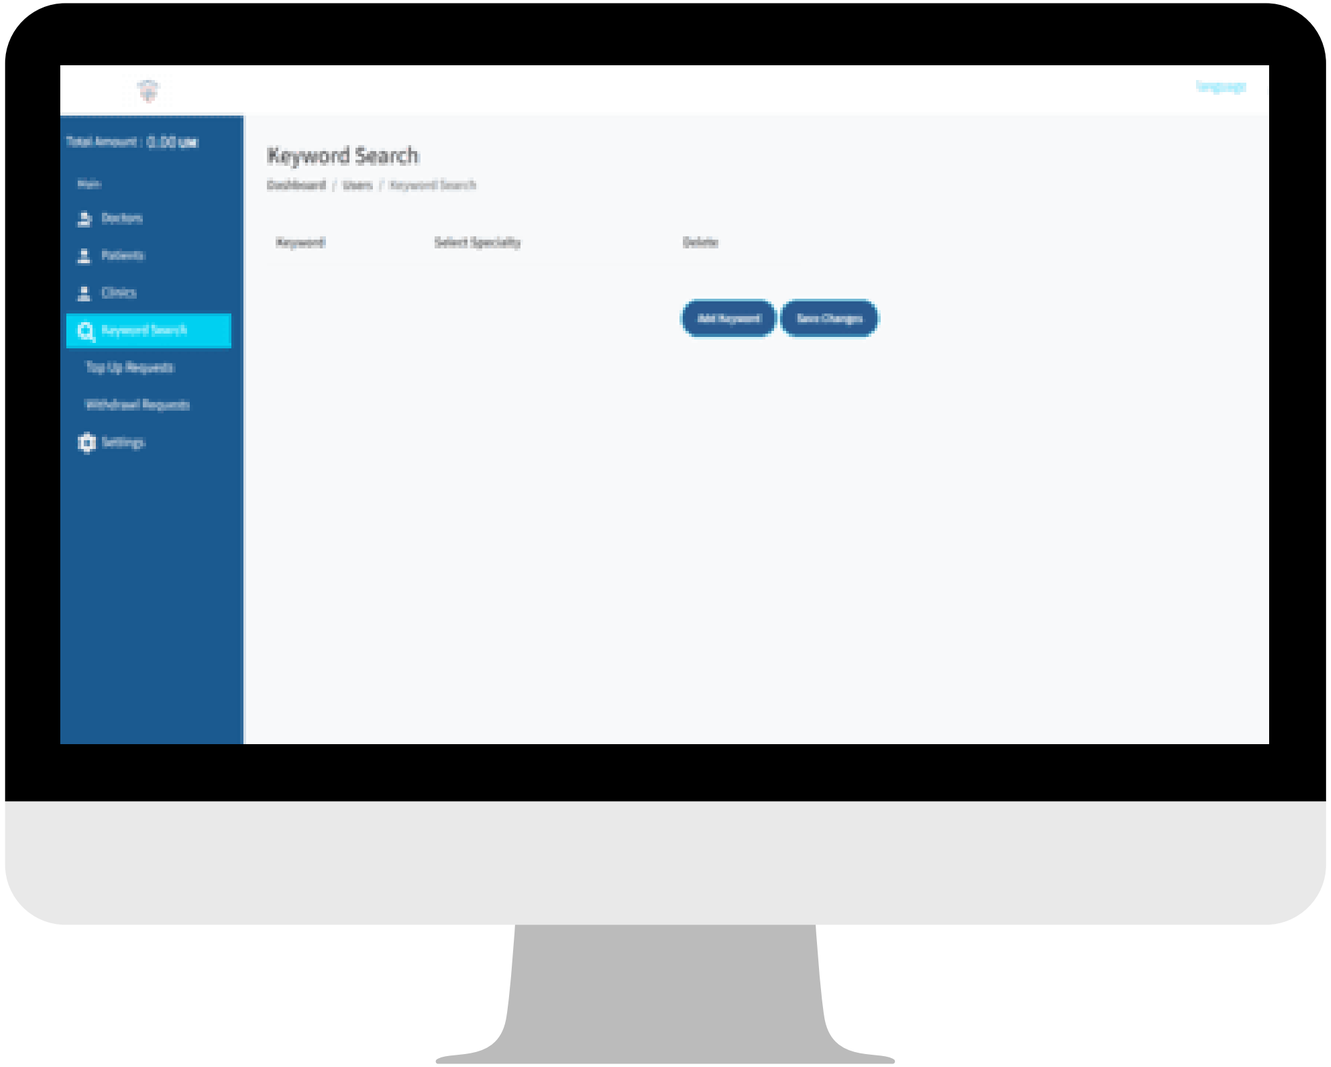


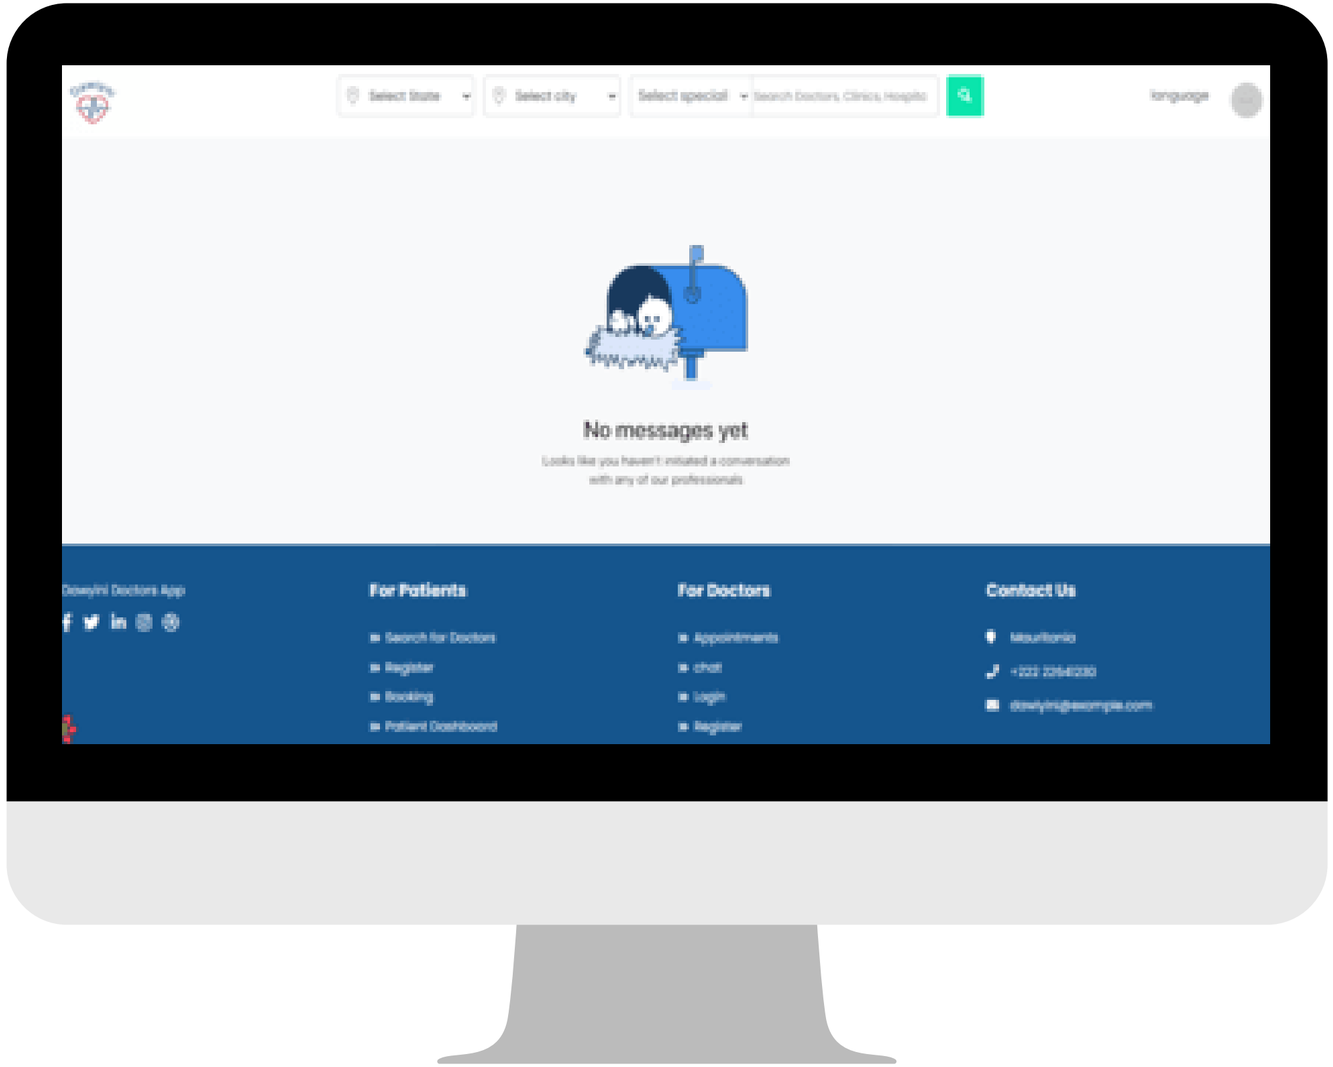
List of Patients

With manual booking routines, many patients have a problem with not showing up for an appointment. The application will allow patients to View and Search their current or scheduled appointments with their doctors. The application will notify patients of their scheduled appointments.

keyword Search

The search function allows you to search in ways that were not possible before. The metadata tags' onset of defined identities has truly broadened the field. The application enables patients to Advanced doctor searches based on symptoms, diseases, conditions, and doctor specializations.



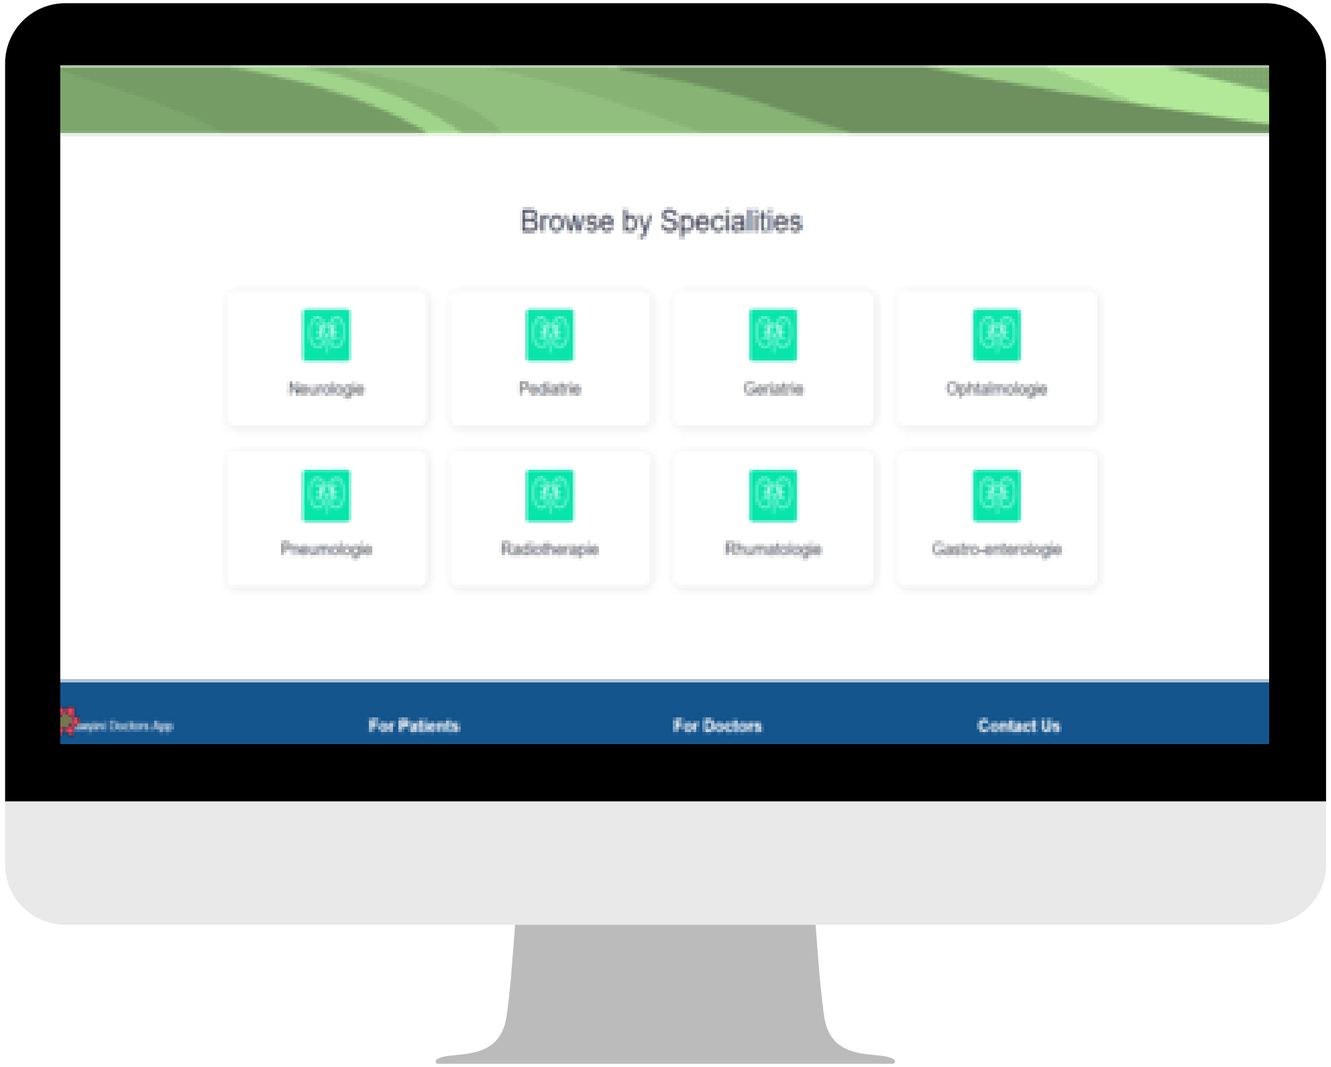


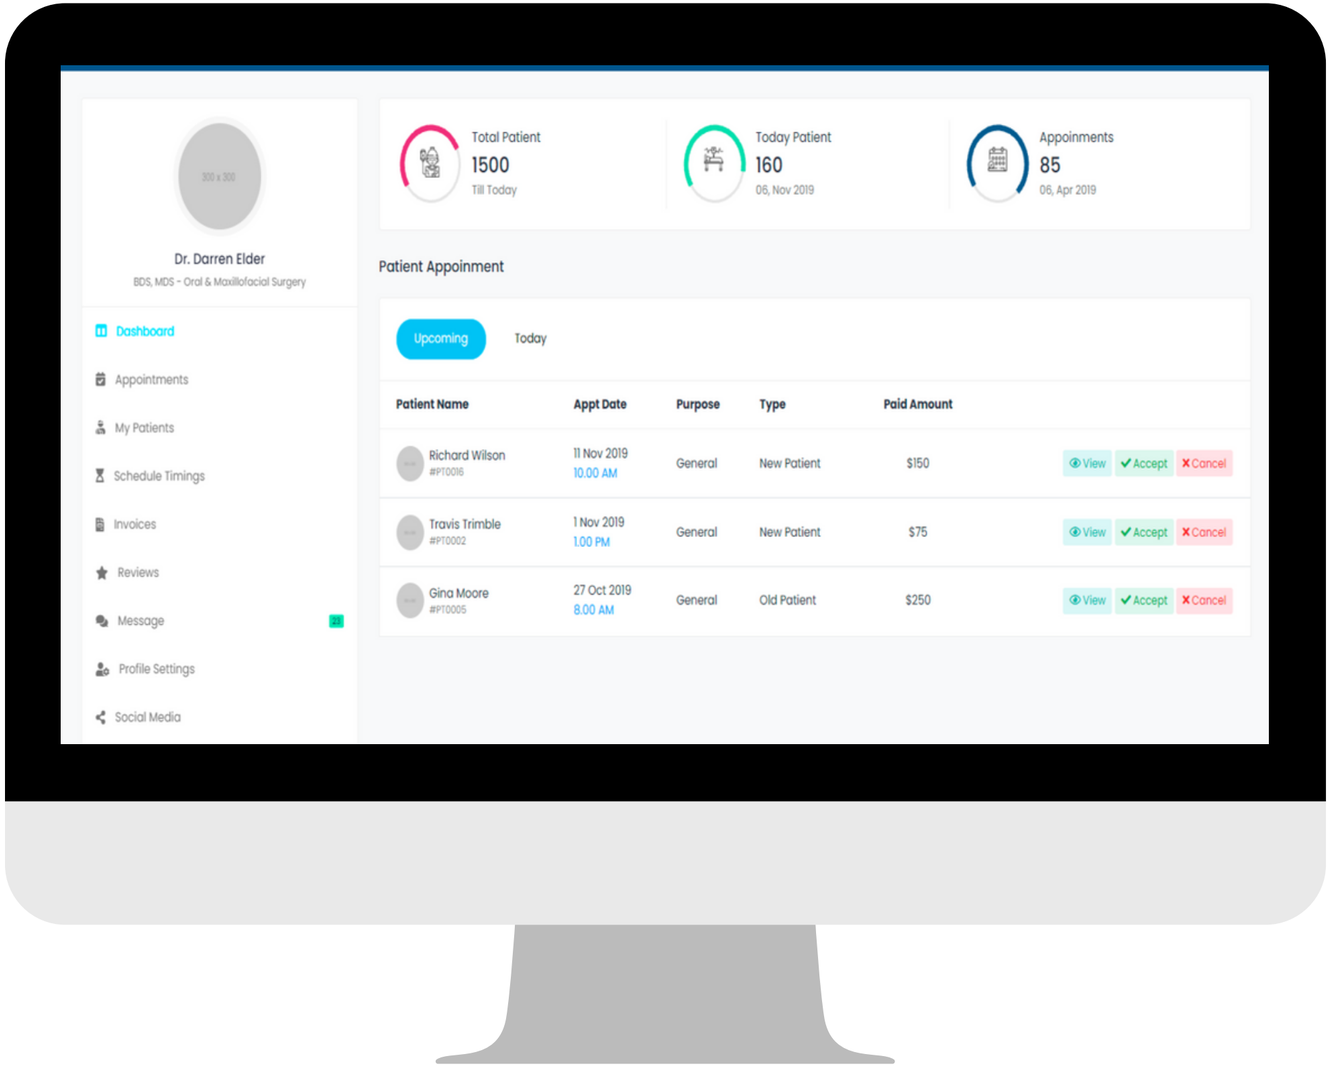
Smart Chat

Confidential chats with doctors allow patients to share all their medical information in a secure way, building trusting relationships. The web application allows patients and doctors to have a proper message chat, alongside enabling them to have a voice call or video call.

Smart Browse

Taking a step a little further and narrowing it down for the patients to browse the web application more smartly and efficiently. Allowing patients to browse doctors as per their specialties i.e. neurology, kidney, heart, etc.





Dashboard

The patient dashboard provides a detailed overview of a patient's key health metrics. Allow patients to have a dashboard view in which they can see their profile completion, favorites, appointments, steps they took, manage their online consultations, etc.

"The app is just wonderful and so easy to use"

Abd al-Uzza

Our Picture Tailored White Label for mobile and web

An example of an online schedule

Audio, Video, & Chat

Plug & Play for services such as Firebase cloud messaging, socketIO, and Twilio

Payment gateway

Integrated Stripe, 2checkout, and other middle eastern payment gateways

Electronic health record

All medical reports, vaccinations, and prescriptions saved can be viewed by the doctor during a consultation.

Marketplace model

Patients can search for doctors based on ratings and reviews. Both the users can review after consultations.

Wallet and Payouts

The patient can use wallet top-up and pay through it while the doctors get automatically paid after platform fees after every span of time

FRIZHUB

Our Picture Tailored White Label

- In terms of finances, the costs of our **white-label** software **solution will be much cheaper** when incorporated into the total overall pricing of your entire project.

- You will get a market-ready customized health care solution by adding your brand to our deployment-ready white-label product.

- All technical issues associated with white label platform development, as well as further support and maintenance, are entirely outsourced to you.

- Your brand receives the product which is made in accordance with technical requirements set before implementation, with bits and bytes customization and you are set for a launch.

Satisfied Clients
