Rationalization

How our white label solution was compatibly merged diminishing language barriers in UAE?

FRiZHUB case study

About Nosghy

Improving the scale of digitized health care & furnishing modern-era custom build white label bridge between doctors & patients.

Nosghy reached and hired us as their engineering partner to create a telemedicine platform where users can connect with doctors on their panel and get medical attention. They also wanted a way to digitize the health records so the doctors or the patients do not have to jump between platforms

Having built a complete white label system for telemedicine at the beginning of the pandemic, we proposed to modify the white label that has reshaped telemedicine grounds for multiple startups. The white label is state of the art and uses modern cutting edge solutions to propose complete flexibility.

FRiZHUB

Less than 8 weeks!

Deployment Process

The **Nosghy** application was deployed in less than 8 weeks

FRiZHUB

Digitized health care is possible

Our white label is a mix between flexibility to alter features and ability to reuse existing base to save time, resources, and money. Not only we unleashed our services that fit perfectly to the deployed product but we diminished the language barriers of our white label solution in regions of UAE. Users these days are smartphone savvy and our white label solution completely plays around with it.

In our continuous cycles of research and brainstorming sessions linked with the competitive study of the Telemedicine market, we highlighted and categorized that our main challenges were:

Problem

Visiting a doctor physically and maintaining a viable health history.

Affect and Impacts

The traditional methods of consulting a doctor and managing health records.
To establish an effective solution easily managed by any health organization.

- Time-saving
- Eliminating the manual process of health management.

Solution

A smartphone application accessible anywhere around the globe.

FRiZHUB

Tech Stack Implementation

Data Management

The selection of MYSQL was mainly security and on-demand Scalability. It provides better performance to manage large scale of data

Development Environment

NodeJS, a push-based Architecture, and reliable development environment. The backend of Our white label solution is Built on it. The mirror Side of our hard work should be reflected in the best declarative, efficient, and flexible way. To accomplish the boundaries of the web our developers inherited React.

Third party Services

In order to make the notifications work seamlessly, we used firebase cloud messaging. Data will talk to you if you're willing to listen and for that sole reason we used Google Tag Manager. Integrated Chat, Audio/Video as well as SMS Verification with Twilio. AWS serverless for cloud services

What makes you unique

It serves a variety of purposes, making presentations powerful tools for convincing and teaching.

FRiZHUB

End-to-End solution for Nosghy

Records, prescriptions and vaccinations

Patients can keep a history of different types of tests and reports. They can choose to share their medical records, vaccination, and past prescriptions with a doctor while they are in consultation

Wallet and Payouts

Currently, there is no direct payment gateway such as PayPal or Stripe, the patient can top up their wallet using their debit cards and keep a track of wallet transactions and make online consultations with the wallet credit

Consultation (Chat, audio, and video call

Interact with a doctor using chat, audio, or video calls (Integrated Twilio which is one of the most sought-after technologies).

Taxonomy Search

enables patients to Advanced doctor search based on symptoms, diseases, conditions, and doctor specializations.

Dashboard and Reports

Doctors have a summary View of their consultations in the past. The patient dashboard provides a detailed overview of a patient's key health metrics.

Seminar

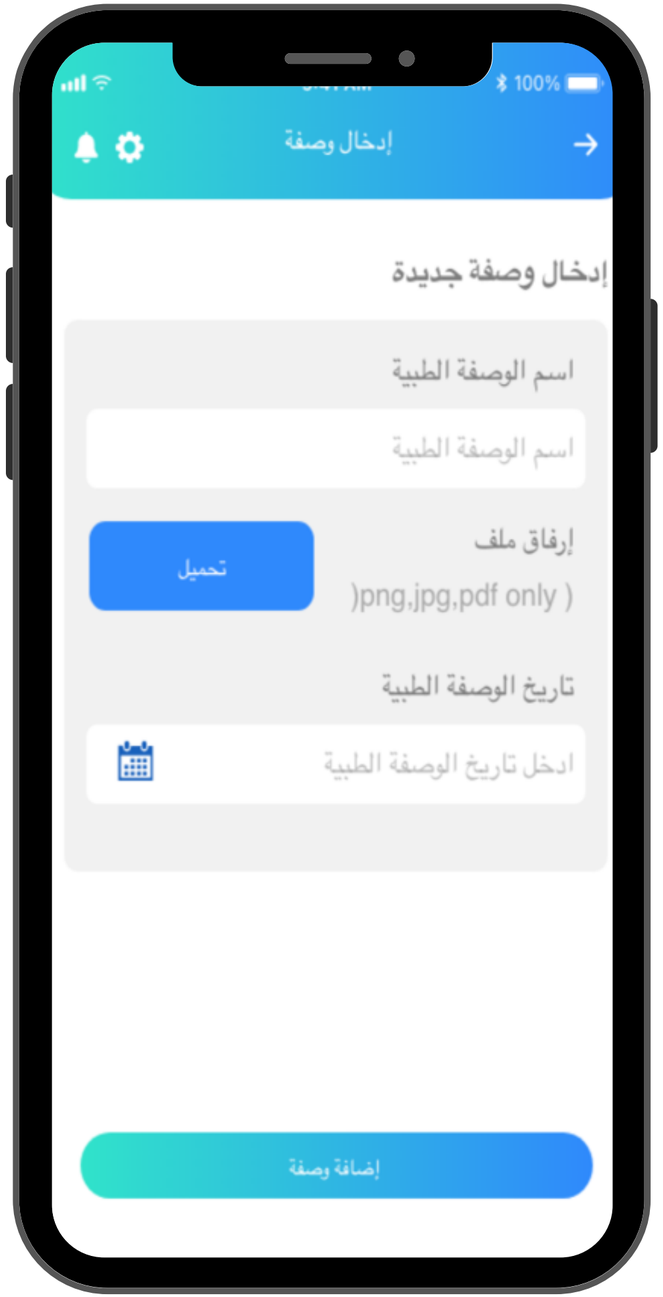
Allowing the admin to schedule a seminar on various health or other social-related issues.

FRiZHUB

Design Layouts

The design of the app was a big challenge. Although this was just another digitized platform, attention to detail was very important. Color scheme to uplinks and interface is designed to facilitate doctors and patients in an effective manner. The **ReactJS** and **ANT designs** were designed completely in-house. The next sections translate to the following screens:

1. **Prescription Management**
2. **Earning Management**
3. **Profile / Dashboard / Ratings (Doctor)**
4. **Dashboard / Profile (Patient)**
5. **Appointment Details (Patient)**
6. **Appointment Details (Doctor)**
7. **Appointment Details (Patient)**
8. **Seminar Details**
9. **Doctor-Patient Chat**
10. **Payment Gateway**



Prescriptions Management

Prescription records for the patient to keep a track of previous allergies and medicine stack they have consumed over a period of time. Patients can view, search, and manage their associated prescription records from the app Doctors can view patients' past prescriptions during a consultation to keep up to date. Patients can attach reports in the form of images or documents and add key indicators. The doctor can add a prescription during a video consultation and it is automatically stacked on the records page.

FRIZHUB

Earning Management

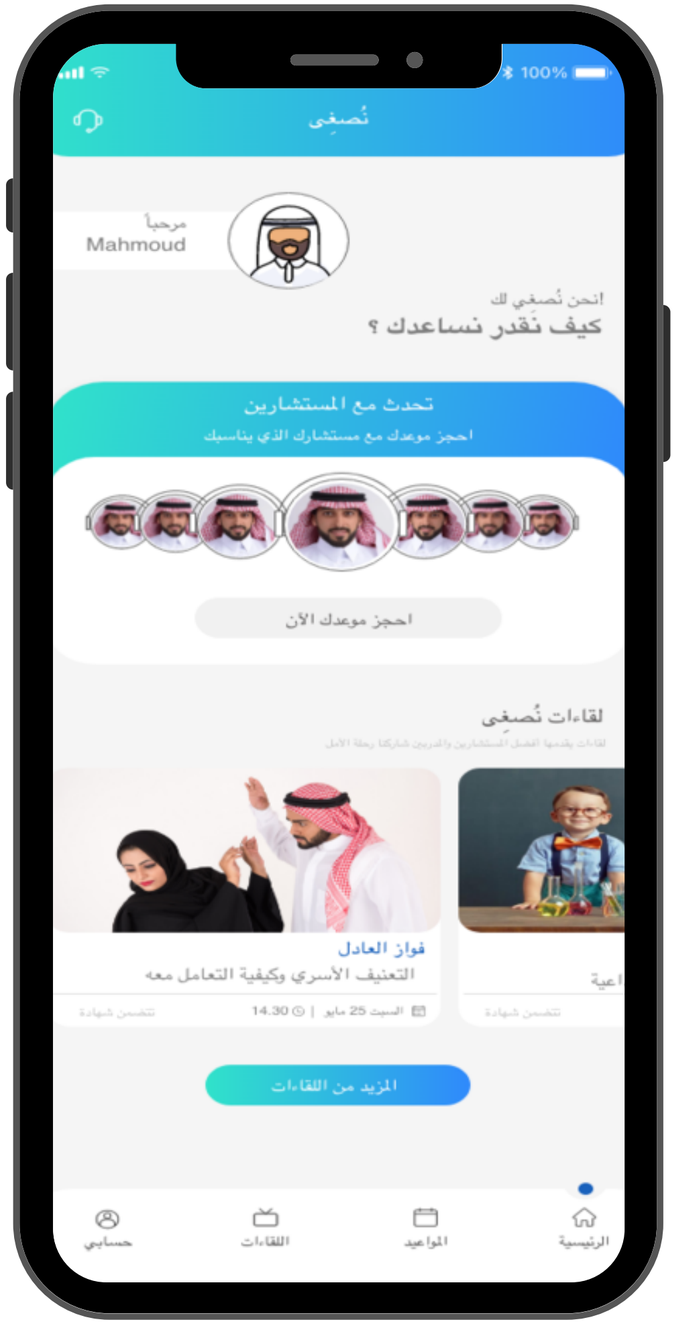
As per exercised expertise, we implemented a payment gateway directly integrated with the management of doctor earnings from consultation. The feature allows doctors to view their earnings weekly, monthly, and yearly along with their integrated bank details.

FRIZHUB

Doctor Profile / Dashboard / Ratings

The application fills the perspective of doctors in every niche. The application will allow doctors to have a profile view in which they can see their profile completion and update it if they feel like it. Only patient reviews to rank doctors are too mainstream. The ratings are based more on opinion than data showing how well a doctor provided treatment or care. The application allows patients and doctors to rate each other after consultation in order to maintain a positive track on both ends

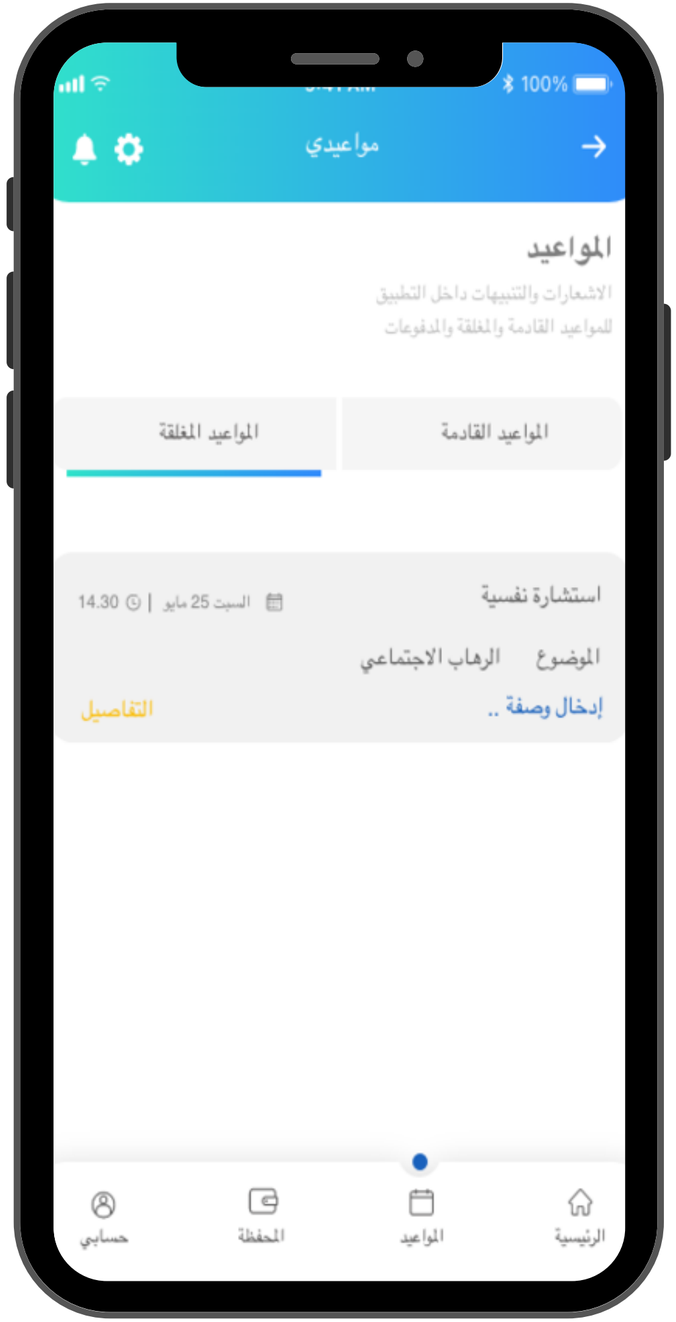
FRIZHUB



Patient Dashboard / Profile

The patient dashboard provides a detailed overview of a patient's key health metrics. Allow patients to have a dashboard view in which they can see their profile completion, favorites, appointments, manage their online consultations, etc. The Patients can view their general information and update it if they wish to.

FRIZHUB



Appointment Details (Doctor)

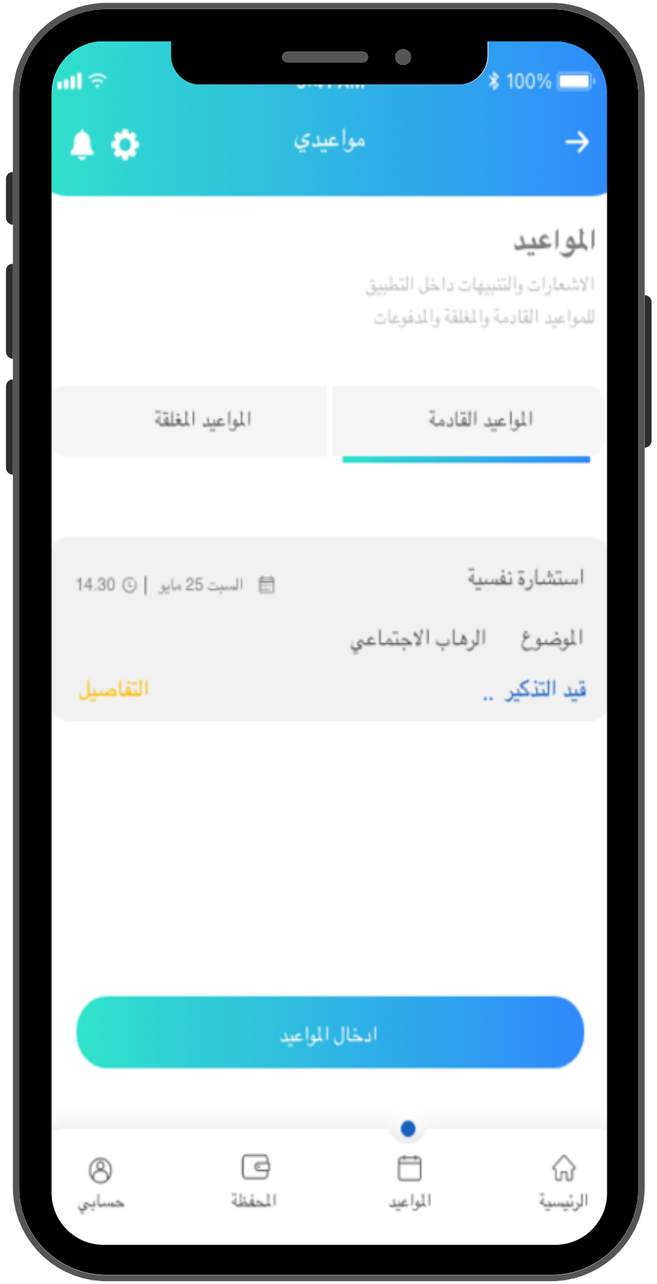
The doctor-patient relationship has been and remains a keystone of care. Increasing patient data for a doctor suggest and potentially increase consultation. The application will allow doctors to view patient, patient health metrics, previous conditions/symptoms, and other details. The application will allow the doctor to add comments after the consultation which are later on added as reviews. The application will allow the doctor to rate the patient after consultation based on stars.

FRIZHUB

Appointment Details (Patient)

With manual booking routines, many patients have a problem with not showing up for an appointment. The application will allow patients to View and Search their current or scheduled appointments with their doctors. The application will notify patients of their scheduled appointments.

FRIZHUB



Seminar Details

To guide your audience in the right direction is key to a big change in our society. The feature allows the admin to schedule a seminar on various health or other social-related issues. The feature allows patients to join the scheduled seminar and get notified before the starting of it.

FRIZHUB

Doctor-Patient Chat

Confidential chats with doctors allow patients to share all their medical information in a secure way, building trusting relationships. The application allows patients and doctors to have a proper message chat, alongside enabling them to have a voice call or video call.

FRIZHUB

Payment Gateway

Innovation in the payments industry has led to significant changes on the grounds of smartphones leading to smart applications. we cater to the simplest of solutions for payments resolving terminal bridges of banks and other analytical systems. Patients and doctors can simply attach their debit or credit accounts to our application and they are set to receive and pay the desired amount for the respective utilization of the service.

FRIZHUB

“The app is just wonderful and so easy to use"

Abdullah

FRiZHUB

Our Picture Tailored White Label for mobile and web

An example of an online schedule

Audio, Video, & Chat

Plug & Play for services such as Firebase cloud messaging, socketIO, and Twilio

Payment gateway

Integrated Stripe, 2checkout, and other middle eastern payment gateways

Electronic health record

All medical reports, vaccinations, and prescriptions saved can be viewed by doctor during consultation

Marketplace model

Patients can search doctors based on rating s and reviews. Both the users can review after consultations

Wallet and Payouts
